Mushfique Shahriar Aurnab

mushfique@dgist.ac.kr | github.com/mushfique-dgist

Education

Daegu Gyeongbuk Institute of Science and Technology (DGIST) — Daegu, Republic of Korea
B.S. student; intended focus in Computer Science and Electrical Engineering — *Aug. 2024 – Present*

Maastricht University, Center for European Studies — Maastricht, Netherlands
Summer Programme in European Studies — *Summer 2026*

- Coursework: Global Governance of AI; Intercultural Communication.

Experience

Undergraduate Researcher, UGRP I — DGIST
Comparative Study of Catastrophic Forgetting in CNNs and Vision Transformers — *Spring 2026*

- Designed a nine-run sequential CIFAR-10 diagnostic across three class splits and three seeds, using linear probes at six depths to distinguish classifier-readout failure from deeper representation loss.
- At Task-B epoch 25, 79.7% of misclassified old-task examples remained linearly recoverable; refitting the full linear readout restored 74.6% mean old-task accuracy.
- Compared five replay-selection strategies and retained the negative result: random replay outperformed collision-, fate-, memorization-, and speed-based targeting in buffer-only recovery.

Computer Vision Lab, DGIST — Daegu, Republic of Korea
Student Researcher – Video Dataset Annotation — *May 2025 – Aug. 2025*

- Annotated video datasets for experiments in video–text alignment and text-based object detection under Prof. Sunghoon Im.

Personal Projects

GPX Motion Analysis | *Python, time-series alignment, Matplotlib* — 2026

- Rebuilt a motion-data project as a tested CLI that aligns irregular GPX tracks on a shared grid while preserving segment boundaries and long gaps as missing evidence.
- Exports aligned samples, motion metrics, threshold sensitivity, summary JSON, and figures from deterministic synthetic fixtures; CI checks Python 3.11 and 3.14.

Vox Pop | *Python, MCP, FastEmbed* — 2026

- Built a Python library, CLI, and MCP server for searching nine public discussion platforms; a semantic router selects relevant communities before retrieval.

Course Extractor | *Python, Requests, BeautifulSoup* — 2026

- Implemented FOSE endpoint discovery with JSON-LD and HTML fallbacks; validated structured JSON and Markdown output on 508 Harvard DCE courses with zero reported page errors.

MapleStory Code Battle AI | *Python, OpenCV, minimax* — 2025

- Converted screen captures into board state with template matching and HSV ownership detection, then selected moves with summed-area tables and 3-ply minimax with alpha-beta pruning.

Technical Skills

Languages: Python, C, C++
Machine learning and vision: PyTorch, torchvision, scikit-learn, pandas, NumPy, OpenCV, Matplotlib, linear probing
Systems and tools: Git, pytest, asynchronous HTTP APIs, MCP, CLI packaging, JSON and Markdown pipelines
